

Three moves you can make on Monday

No special software needed. Pick one assignment and plan each move for it.

1 Outcomes first

Write your outcomes first, including one that students must do without AI.

How will students show mastery of that outcome live, where you can watch them do it?

My no-AI outcome:

Where students will show it live:

2 Run a council

Have students ask three AI models the same question and compare the answers. Require a source for every number.

Agreement between models is not evidence: three models agreeing is one source, counted three times.

The question my students will put to three models:

What counts as a source in my course:

3 Grade the revision

Put the points on the revision, after a five-minute live Q&A with classmates asking the questions.

Classmates score the work blind and write one hard question each before class. The revision carries the points.

The assignment I'll try this on:

Points I'll move from the first draft to the revision:

WITH ASSISTANCE

WITHOUT ASSISTANCE

**SCORE THE
PRODUCT
ONLY**

A • Pretty artifact

Points: _____

B • Closed check

Points: _____

**SCORE
OBSERVABLE
COMPETENCE**

C • Coached practice

Points: _____

D • The credential

Points: _____

[illegible]

The percentages are approximate targets, not measurements. Assisted work can teach. Only independent performance can certify. Ready to redesign one assignment? Try AI Proof free at aiproof.crucibl.tech. Don't paste student names or work.
